

Guide to Creating Images for the Still Store

Note: This guide demonstrates how to use Adobe Photoshop to create images for the Globecaster. The process should be similar with other image editing software.

1. Start a new image. Make the width 640, the height 486 and the resolution 72 pixels/inch.
2. Create your image through whatever means you would like.

3. Click Edit at the top of the screen and choose Image Size. Make sure "Constrain Proportions" is not checked. Change the width to 720 and click OK.

4. Your image will now look slightly stretched. This is intentional. The image will display correctly on a television. You may now save your image. Most formats are OK. If you use JPEG, make sure you use "Maximum" quality. The image is now ready for use on the Globecaster. You may bring images in on floppy disk, zip disk, or CD. You may also download images from the Internet.
