

## Instructions on Setting up a Fly Key

1. On the switcher, press the yellow “MLE 1” button in the PGM bus of MLE 2. In the “KEY” bus of MLE 1, select the source that you want to have in your fly box. In the BKGD bus, select the video source you wish to use as the main image on the screen.

2. In the “Key 1” section, select PST PATT. Press the cut button to turn the key on. You will see the on button light up to let you know that the key is turned on.

3. At this point, the entire program screen will be taken up by the source you’ve selected in the key bus. Twist the positioner knob to the left to change the scale of the image.

4. You can move the positioner knob in any direction to move your image around the screen. If you ever “lose” your image, you can press the center button to return it to its original position.
